Numerical Solution of Stochastic Differential Equations with Jumps in Finance (Stochastic Modelling and Applied Probability)

Eckhard Platen, Nicola Bruti-Liberati

Numerical Solution of Stochastic Differential Equations with Jumps in Finance (Stochastic Modelling and Applied Probability) Eckhard Platen, Nicola Bruti-Liberati

In financial and actuarial modeling and other areas of application, stochastic differential equations with jumps have been employed to describe the dynamics of various state variables. The numerical solution of such equations is more complex than that of those only driven by Wiener processes, described in Kloeden & Platen: Numerical Solution of Stochastic Differential Equations (1992). The present monograph builds on the above-mentioned work and provides an introduction to stochastic differential equations with jumps, in both theory and application, emphasizing the numerical methods needed to solve such equations. It presents many new results on higher-order methods for scenario and Monte Carlo simulation, including implicit, predictor corrector, extrapolation, Markov chain and variance reduction methods, stressing the importance of their numerical stability. Furthermore, it includes chapters on exact simulation, estimation and filtering. Besides serving as a basic text on quantitative methods, it offers ready access to a large number of potential research problems in an area that is widely applicable and rapidly expanding. Finance is chosen as the area of application because much of the recent research on stochastic numerical methods has been driven by challenges in quantitative finance. Moreover, the volume introduces readers to the modern benchmark approach that provides a general framework for modeling in finance and insurance beyond the standard risk-neutral approach. It requires undergraduate background in mathematical or quantitative methods, is accessible to a broad readership, including those who are only seeking numerical recipes, and includes exercises that help the reader develop a deeper understanding of the underlying mathematics.

From reader reviews:

Jennifer Stewart:

Do you have favorite book? Should you have, what is your favorite's book? Book is very important thing for us to learn everything in the world. Each reserve has different aim as well as goal; it means that reserve has different type. Some people feel enjoy to spend their time to read a book. They can be reading whatever they acquire because their hobby is actually reading a book. Think about the person who don't like reading a book? Sometime, person feel need book if they found difficult problem or exercise. Well, probably you will need this Numerical Solution of Stochastic Differential Equations with Jumps in Finance (Stochastic Modelling and Applied Probability).

Steven Thomas:

Reading a e-book can be one of a lot of exercise that everyone in the world really likes. Do you like reading book so. There are a lot of reasons why people enjoy it. First reading a reserve will give you a lot of new info. When you read a e-book you will get new information mainly because book is one of numerous ways to share the information or even their idea. Second, reading a book will make anyone more imaginative. When you reading a book especially hype book the author will bring you to imagine the story how the character types do it anything. Third, you are able to share your knowledge to other individuals. When you read this Numerical Solution of Stochastic Differential Equations with Jumps in Finance (Stochastic Modelling and Applied Probability), you could tells your family, friends and also soon about yours book. Your knowledge can inspire the mediocre, make them reading a reserve.

Shalon Dougherty:

Do you have something that you prefer such as book? The guide lovers usually prefer to choose book like comic, small story and the biggest you are novel. Now, why not attempting Numerical Solution of Stochastic Differential Equations with Jumps in Finance (Stochastic Modelling and Applied Probability) that give your fun preference will be satisfied by simply reading this book. Reading behavior all over the world can be said as the opportunity for people to know world far better then how they react to the world. It can't be stated constantly that reading addiction only for the geeky individual but for all of you who wants to always be success person. So , for every you who want to start reading as your good habit, you can pick Numerical Solution of Stochastic Differential Equations with Jumps in Finance (Stochastic Modelling and Applied Probability) become your personal starter.

Karen Lambert:

Are you kind of busy person, only have 10 or maybe 15 minute in your day to upgrading your mind talent or thinking skill also analytical thinking? Then you are receiving problem with the book in comparison with can satisfy your short time to read it because pretty much everything time you only find publication that need more time to be study. Numerical Solution of Stochastic Differential Equations with Jumps in Finance

(Stochastic Modelling and Applied Probability) can be your answer given it can be read by you actually who have those short time problems.
