Epidemiological Research: Terms and Concepts

O. S. Miettinen

Epidemiological Research: Terms and Concepts O. S. Miettinen

This book is by a single author – someone who, after medical school, has devoted half-a-century of full-time effort to ever better understand both clinical and community medicine and the research that is needed to produce the scientific knowledge-base of these.

The book is organized so as to address in separate sections first the preparatory topics of medicine (clinical and epidemiological), science in general, and statistics (mathematical); then topics of epidemiological research proper; and, finally, topics of ‘meta-epidemiological’ clinical research. In those two main sections, a further grouping is based on the distinction between objects and methods of study. In this framework, the particular topics are addressed both descriptively and quasi-prescriptively, commonly with a number of explicatory annotations.

This book is intended to serve as a *handbook* for whomever is, in whatever way, concerned with epidemiological or ‘meta-epidemiological’ clinical research. But besides, it is intended to serve as a *textbook* for the students in introductory courses on ‘epidemiological’ research – to which end there is a suggested hierarchy of the concepts that might reasonably be covered.

From reader reviews:

Doris Moreno:

In this 21st millennium, people become competitive in every single way. By being competitive now, people have to do something to make them survive, being in the middle of the actual crowded place and notice by means of surrounding. One thing that sometimes many people have underestimated it for a while is reading. Sure, by reading a book your ability to survive increases then having a chance to stand up than others is high. For you personally who want to start reading the book, we give you that Epidemiological Research: Terms and Concepts book as a basic and daily reading book. Why, because this book is greater than just a book.

Curtis Dugan:

Are you kind of a stressful person, only have 10 or even 15 minutes in your morning to upgrading your mind proficiency or thinking skill even analytical thinking? Then you are experiencing a problem with the book when compared with can satisfy your limited time to read it because this all time you only find reserves that need more time to be learned. Epidemiological Research: Terms and Concepts can be your answer given it can be read by an individual who has those short time problems.

Jason Villalobos:
