Environmental Pollution and Control, Fourth Edition J. Jeffrey Peirce Ph.D. in Civil and Environmental Engineering from the University of Wisconsin at Madison, P Aarne Vesilind, Ruth Weiner Ph.D. in Physical Chemistry from Johns Hopkins University

Complex environmental problems are often reduced to an inappropriate level of simplicity. While this book does not seek to present a comprehensive scientific and technical coverage of all aspects of the subject matter, it makes the issues, ideas, and language of environmental engineering accessible and understandable to the nontechnical reader.

Improvements introduced in the fourth edition include a complete rewrite of the chapters dealing with risk assessment and ethics, the introduction of new theories of radiation damage, inclusion of environmental disasters like Chernobyl and Bhopal, and general updating of all the content, specifically that on radioactive waste.

Since this book was first published in 1972, several generations of students have become environmentally aware and conscious of their responsibilities to the planet earth. Many of these environmental pioneers are now teaching in colleges and universities, and have in their classes students with the same sense of dedication and resolve that they themselves brought to the discipline. In those days, it was sometimes difficult to explain what indeed environmental science or engineering was, and why the development of these fields was so important to the future of the earth and to human civilization. Today there is no question that the human species has the capability of destroying its collective home, and that we have indeed taken major steps toward doing exactly that.

And yet, while, a lot has changed in a generation, much has not. We still have air pollution; we still contaminate our water supplies; we still dispose of hazardous materials improperly; we still destroy natural habitats as if no other species mattered. And worst of all, we still continue to populate the earth at an alarming rate. There is still a need for this book, and for the college and university courses that use it as a text, and perhaps this need is more acute now than it was several decades ago.

Although the battle to preserve the environment is still raging, some of the rules have changed. We now must take into account risk to humans, and be able to manipulate concepts of risk management. With increasing population, and fewer alternatives to waste disposal, this problem is intensified. Environmental laws have changed, and will no doubt continue to evolve. Attitudes toward the environment are often couched in what has become known as the environmental ethic. Finally, the environmental movement has become powerful politically, and environmentalism can be made to serve a political agenda.

In revising this book, we have attempted to incorporate the evolving nature of environmental sciences and engineering by adding chapters as necessary and eliminating material that is less germane to today's students. We have nevertheless maintained the essential feature of this book -- to package the more important aspects of environmental engineering science and technology in an organized manner and present this mainly technical material to a nonengineering audience.

This book has been used as a text in courses which require no prerequisites, although a high school knowledge of chemistry is important. A knowledge of college level algebra is also useful, but calculus is not

required for the understanding of the technical and scientific concepts.

We do not intend for this book to be scientifically and technically complete. In fact, many complex environmental problems have been simplified to the threshold of pain for many engineers and scientists. Our objective, however, is not to impress nontechnical students with the rigors and complexities of pollution control technology but rather to make some of the language and ideas of environmental engineering and science more understandable.

PAV

JJP

RFW

An introduction to the more important aspects of environmental science and technology.

Well organized and suitable for both the technical and non-technical reader.

Ideal for the student taking courses in this field who does not have an extensive engineering, mathematical, or environmental background.

From reader reviews:

Keith McLeod:

Here thing why this Environmental Pollution and Control, Fourth Edition are different and reputable to be yours. First of all reading through a book is good however it depends in the content of computer which is the content is as yummy as food or not. Environmental Pollution and Control, Fourth Edition giving you information deeper and different ways, you can find any reserve out there but there is no book that similar with Environmental Pollution and Control, Fourth Edition. It gives you thrill reading through journey, its open up your personal eyes about the thing in which happened in the world which is might be can be happened around you. You can bring everywhere like in playground, café, or even in your approach home by train. When you are having difficulties in bringing the printed book maybe the form of Environmental Pollution and Control, Fourth Edition in e-book can be your alternate.

Katrina Varga:

Do you one of the book lovers? If so, do you ever feeling doubt while you are in the book store? Make an effort to pick one book that you find out the inside because don't ascertain book by its include may doesn't work the following is difficult job because you are scared that the inside maybe not as fantastic as in the outside appear likes. Maybe you answer can be Environmental Pollution and Control, Fourth Edition why because the wonderful cover that make you consider with regards to the content will not disappoint a person. The inside or content will be fantastic as the outside or perhaps cover. Your reading 6th sense will directly assist you to pick up this book.

Noah Gardner:

This Environmental Pollution and Control, Fourth Edition is great publication for you because the content that is full of information for you who all always deal with world and get to make decision every minute. This kind of book reveal it information accurately using great plan word or we can say no rambling sentences inside it. So if you are read the item hurriedly you can have whole information in it. Doesn't mean it only offers you straight forward sentences but hard core information with attractive delivering sentences. Having Environmental Pollution and Control, Fourth Edition in your hand like obtaining the world in your arm, data in it is not ridiculous one particular. We can say that no reserve that offer you world throughout ten or fifteen minute right but this e-book already do that. So , this is certainly good reading book. Hello Mr. and Mrs. active do you still doubt this?

Brenda Burrows:

What is your hobby? Have you heard this question when you got students? We believe that that concern was given by teacher on their students. Many kinds of hobby, Everybody has different hobby. And you also know that little person including reading or as studying become their hobby. You have to know that reading is very

important along with book as to be the issue. Book is important thing to include you knowledge, except your personal teacher or lecturer. You get good news or update concerning something by book. Amount types of books that can you choose to use be your object. One of them are these claims Environmental Pollution and Control, Fourth Edition.
